

## resup: Installation instructions for Windows

### 1. Install the latest Python 2.7 if you don't have it yet:

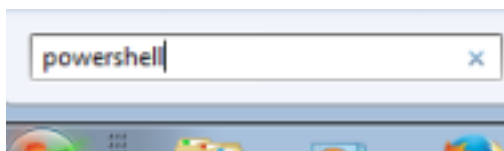

(you need local admin rights on your machine)

1. [download Python 2.7.12 for Windows](#)
2. Double click and select "Add python.exe to Path" in the installer:

### 2. Install *resup* from GitHub:

1. Open a Powershell window:

2. Type:  
`pip install --user git+https://github.com/eawag-rdm/resup.git`  
Note: You can paste text from the clipboard into the Powershell window by **right-clicking** into the window.

### 3. Provide your CKAN API key

1. Point your webbrowser at the Eawag Research Data Platform, log in, and click on your name (top right).
2. Copy your API key (left sidebar, bottom) to the clipboard (Ctrl-C)
3. Type (and paste) into the Powershell window:  
`setx CKAN_APIKEY xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx`  
( 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx' is your key)
4. Close Powershell and open it again (complaints about that to [custserv@microsoft.com](mailto:custserv@microsoft.com))

### 4. Check the installation

Type:

```
resup -h
```

You should get a help text. Not that `resup` has sub-commands, the help of which can be accessed as, e.g.,

```
resup put -h
```

Type:

```
resup list
```

The output should be a list of the packages to which you have write access.

**Please notify me <[harald.vonwaldow@eawag.ch](mailto:harald.vonwaldow@eawag.ch)> about problems with these instructions, about any bugs you discover, and about features you would like to see implemented.**
